PROFILE

- Versatile front-end focused fullstack developer with 1.8 years of industry experience. Contributed to 7 diverse projects spanning various technology stacks in the last 1.8 years, showcasing adaptability and agility by simultaneously handling multiple projects of different tech stacks.
- Excellent collaboration skills, proficient in conducting detailed project requirement analysis and ability to rapidly upskill and seamlessly transition into new projects, ensuring swift integration and impactful contributions.

PROFESSIONAL EXPERIENCE

Niveus Solution Pvt Ltd, *Cloud Associate* 🔗   Sep 2022 – present | Mangalore, India

  Projects:

M&M - Mahindra four you

Description: Mahindra & Mahindra was looking to revamp one of their existing applications, 'With You Hamesha'. The existing application is built on an outdated monolithic architecture and has problems with scalability. The application also needed to be improved on the customer servicing and experience as well as usability front.

Responsibilities:

- Developed user interfaces for multiple screens, adeptly editing and repurposing existing modules to align with specific project requirements.
- Engineered modules for uploading and previewing images and PDFs, enhancing the application's functionality and user experience.
- Managed API calls utilizing the Volley architecture, seamlessly integrating backend data into the frontend for dynamic rendering.

Skills: Android , Kotlin, MVVM, Volley, Fragments, Recyclerview, Picasso, Shared Preferences

ICICI - Insta Rainbow - Phase 2

Description: Creating different feature products in ICICI UCJ sourcing platform, new requirement development based on the go ahead from business, IT and Compliance team. Their product portfolio consist of Digital Savings, Current, VKYC Partnership, Loan Assets, Cards, Mortgages etc.

Responsibilities:

- As the sole front-end developer, I spearheaded the design of the complete front-end architecture utilizing MVVM and Retrofit. Additionally, I conducted requirement analysis and translated it into Figma UI wireframes for the POC project.
- Pioneered an optimal solution for managing conditional in-app webview redirections, profoundly enhancing user experience. This innovative concept led to a notable surge in business transactions. The webview redirections were dynamically orchestrated based on API responses, automatically closing the webview upon completing specific steps and seamlessly redirecting users back to the app, where they were directed to the relevant screen based on the interaction with the webview.

- Leveraged Retrofit to streamline API calls, ensuring efficient communication with backend services.
- Established and maintained client relationships, culminating in the successful delivery of comprehensive demos that met their expectations and requirements.

Skills: MVVM architecture, Retrofit, Jetpack Navigation Recycler View, Fragments. UI layouts, Kotlin, Data handling, Debugging, Requirement analysis, Stakeholder Management

ICICI - Customer Service Request - Phase 2
Description: ICICI CSR(Customer Service Request) app is the easiest, fastest and most convenient way of updating the bank details if anybody who is having
ICICI bank account and needs to change it.

Responsibilities:
- Developed responsive web applications from inception using React.js and Tailwind CSS frameworks, employing Zustand for efficient state management.
- Designed and implemented custom components integral to production, enhancing both functionality and user experience.
- Facilitated sprint planning by estimating efforts and identifying potential risks, ensuring efficient project management and timely delivery.
- Collaborated with clients and Business Analysts to conduct comprehensive requirement analyses, fostering clear communication and alignment of project objectives.
- Demonstrated leadership by effectively managing responsibilities in the absence of the Team Lead, ensuring continuity and efficiency within the team's operations.

Skills: Reactjs, Javascript, Html, CSS, Tailwind CSS, Zustand, Responsive web

AFYA Phase 3
Description: Afya is a virtual care application that can bring patients, PCPs and specialists into a discussion together. Text, voice, video and attachments are all captured in the same virtual session.

Responsibilities:
- Proficiently debugged and resolved intricate bugs that had persisted since the release of various features. It's a legacy codebase that had more than 10k lines of code in each file.
- Integrated AI chatbot to the application.
- Successfully deployed the application to the Play Store subsequent to bug fixes, ensuring that users could access the latest version with improved functionality and reliability.

Skills: Debugging, Bug fixing, Java

Federal Bank- Pulse
Description: This is a single developer support project that had 2 new requirements where single developer had to look after both Android(Kotlin) and IOS(codebase)

Responsibilities:
- Understood the existing source code without any KT and created documentation about the app.
- Implemented and integrated new business logic which involved API communication.

Skills: Android(Kotlin), IOS(Swift), Debugging, VAPT fixing

Bacce Foundation, *Soft skills trainer|Full stack developer* 🔗   Oct 2018 – Jul 2022 | Mangalore, India
Description: Bacce Foundation is a registered Non Profit entity started in the year 2013 comprising of various inspired Individuals. At the heart of its activities has been that of shaping values in the society for general well-being and enhanced performance.

Responsibilities:
- Provided value by planning and delivering content to over 2000+ students belonging to different demography.

- Developed LMS application using MERN stack.

Skills: Public speaking , MERN, Requirement gathering, Teaching, Mentoring.
